

Gallery-controlled Na double well and interlayer-2DEG superconductivity (results_v4)

Data: QE PBE+PAW, spin-polarized, Co-top alkali site, fixed z_0 (runpod/results_v4; k-mesh ± 1.6 meV, spin treatment $< 7\%$ on well drops, $z_0 \pm 0.06$ Å $\rightarrow$ well depths carry a $\pm 50\%$ systematic — α SIGNS are robust). No water anywhere in the model.
