

Gallery-controlled Na double well and interlayer-2DEG superconductivity

Model caveat: c is the CoO₂-CoO₂ spacing of the anhydrous Na(Li)CoO₂ DFT series (this repo); the hydrate c values are placed on this axis as a rigid extrapolation (shaded beyond the DFT range). The hydrate galleries contain H₂O, absent from the model; water screening is expected to shallow the Na well and pull the system back toward the critical point (see MODEL.md).
